

RULES and FAQs for GeekVishwa Hackathon:

1. **Failure to follow any rule can result in immediate disqualification.**
 2. The complete code for your project should be built between 5th and 19th November from scratch. NO REUSING PREVIOUS PROJECTS OR CODE.
 3. You must maintain a public github repository of your project from **Day-1**. (If you don't know, you can [learn to use github](#) within 30 minutes, and it's a necessary skill for all)
 4. You will need to **select your domain on 5th November** and share it on a google form along with your github repo link.
 5. * **You MUST commit your progress on github AT LEAST TWICE** - on **10th** and **15th** of November. GFG VIIT Team will be checking your projects on these days to make sure you are working on a new project from scratch and following the rules.
 6. Teams can use libraries, frameworks, or open-source code in their projects; however, **it should not constitute the majority of the project**. The **core** of the project should be primarily composed of substantial **original code developed by the team**.
 7. * The **last day** to fully submit your project will be **19th November**. We request you to submit your project even if it is not complete.
- **What am I supposed to build?**
 - You can create any form of working project: application (android/ios), website, command line app, data analytics/visualisations, games, ar/vr apps, chatbots, reddit/discord/other site bots, etc.
 - **What if I don't know how to?**
 - This is exactly the chance you have to learn what you always wanted to. Use your 15 days to learn with your team and use something new. That should be your goal.

The Spirit of the Competition:

Remember that hackathons are like marathons. Some people go to compete but most people take part to better themselves and have fun.
